

Ben-Gurion University, Israel

Faculty of Medicine

PhD Student Position in Brain Research and Drug Development

We study dopamine associated brain functions and disorders and develop new drugs for neurological and psychiatric disorders.

We look for students who will lead our drug development program aiming to protect dopaminergic neurons using molecular, behavioural and pharmacological methods.

Our university provides an outstanding research environment, underpinned by state-of-the-art core services, interdisciplinary scientific training programs in an international environment. Our working language is English.

Start date: Preferably Fall 2022.
